Display Members' Records (Estimate 150 minutes)

The total time required for working on Displaying member's records and completely implementing its functional suitability we needed 150 minutes in total.

Design Webpage View (Estimate 20 minutes)

Usually designing a webpage roughly takes around 10 minutes for an individual worker. I have previous experience in designing and sketching front-end webpage. Since we are working in a team, we all had to agree on the design and a lot of ideas were discarded which explains why it took us double the time

Coding Front-End (Estimate 30 minutes)

Coding front-end has recently become very simple over the years with different frameworks. Two of our teammates were responsible for Front-end coding and they were experienced React developers working in the industry. It was easy task for two of them to complete the Front-End code and test for functionality and performance.

Coding Back-End Logic (Estimate 60 minutes)

Back-end code was the most difficult part of our tasks. We all worked on the back-end code and through trail and errors it took us 60 minutes. There were a few problems with connection to the database which costed us 15 extra minutes to fix.
